

Above: View downstream (westerly) from 6th Street.

Left: Southwesterly view, toe rock, live willow poles, willow brush layering sprouting, Bryant Labs building under renovation in background

Right: View southwesterly at the North landing of the Phase II 5th Street bridge; “found” granite blocks, steps down to Fielding East ball field.

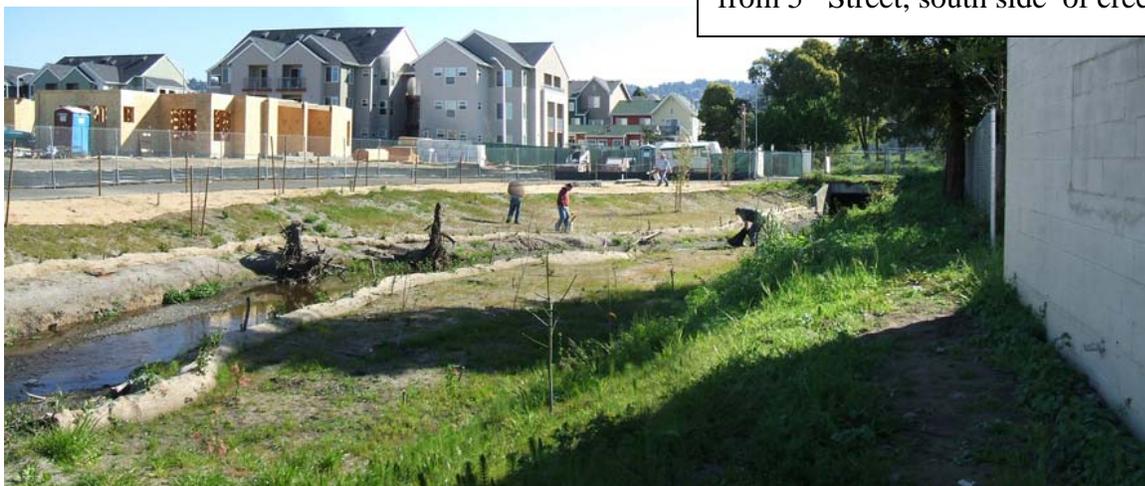

Above: westerly view of new Phase II 5th Street footbridge. Soils are much better than Phase I, and plants are growing much better.

Above: Looking northerly from the end of 5th Street: South landing of the new Phase II footbridge, University Village Step II in the background.

Below: Looking easterly to 6th Street from 5th Street, south side of creek.

Left: Looking northerly with bypass headwall and timber weir set at elevation 18' (bypass some flood flows to Village Creek)

Left: Views from 5th Street landings westerly into maturing Phase I area.

Above: from new bridge south landing at the end of 5th Street.

Below, from new north landing, looking up DG pathway at Phase I/II conform.
