Why Go Solar?

Traditional electricity is sourced from fossil fuels such as coal, oil and natural gas, which emit toxic gasses when burned, contributing to air pollution and global warming.

Solar energy relies on sunlight – a clean energy source. Adding solar improvements to generate energy can help reduce the need for traditional electricity, thereby minimizing the amount of fossil fuels burned and improving air quality.

How to Go Solar

The State of California has generated a list of qualified providers approved to conduct solar installation projects. Both the State and Federal government offer rebates and tax incentives for solar installation. Check the following websites for detailed information:

Go Solar California (State of California): <http://www.gosolarcalifornia.ca.gov/>
Federal Tax Incentives: <http://www.energytaxincentives.org/>
